Student Handbook

Assignment Feedback HB

Your marked assignments will be returned to your repository within 14 days of timely submission. The graded file will appear in your Feedback folder with **"_MARKED"** appended to its filename. Your tutor will include in-line comment (initialed, e.g., #AL:) throughout your work.

Grading System

The Feedback folder contains a ReadMe explaining our three-tier grading system:

- Distinction: Exceptional understanding and application

- Pass: Satisfactory understanding and application

- Revise: Needs improvement before passing

Receiving Feedback

Your tutor will submit feedback as a GitHub Pull Request:

- You'll receive a notification in your GitHub inbox and via email

- The feedback includes a summary comment and your grade

- For Distinction/Pass grades, you'll also receive a model solutions document to compare to your own answers.

- For Revise grades, you'll need to make corrections and resubmit.

Revising Assignments

If your work requires revision:

1. Open your marked assignment in your Codespace

2. Create a copy: right-click → Copy → right-click → Paste

3. Rename the copy: replace **"_MARKED"** with **"_REVISED"**

4. Make the necessary corrections based on tutor feedback

5. Submit using the same process: stage → commit → push

6. Important: Reply to your tutor's Pull Request comment stating you've submitted your revision.

**See the video below**

WARNING

Without the above the tutor won't be notified and will not know to re-mark.

NOTE: Please submit revisions within 14 days of receiving feedback. Delayed submissions may not be prioritised by tutors and could affect certificate issuance.
